# Use your body's own stem cells for advanced rejuvenation therapy.

Your stem cells rejuvenate and renew the systems and tissues of your body, but they are lost with age.

Like storing your newborn's umbilical blood stem cells, you can preserve your own stem cells for future treatment of conditions like heart attack, stroke, autoimmune disease, dementia, arthritis, and more.

Forever Labs is also developing therapies with the aim to use your younger cells to rejuvenate your older self.

# How it works

1

Your doctor collects your stem cells in a simple 15 minute process that can be performed alone, or added to an existing procedure.

2

Your cells are cryogenically frozen and safely stored in an FDA compliant clinical-grade biorepository.

3

You have access to a reservoir of young stem cells that no longer age for use at any time in advanced therapies for rejuvenation, or to fight age-related disease.

┌ ┌  
Your stem  
cells will  
never be as  
young as they  
are today  
└ └

Forever Labs helps you store your young, viable stem cells today, so that you can access them for use in future rejuvenation therapies and to fight age-related disease tomorrow.

Talk to your doctor about storing your cells with Forever Labs, or call us to learn more about the future of medicine.
