
Why Store My Stem Cells?

The number and therapeutic quality of our stem cells diminishes with age.

Storing your stem cells today preserves them for future therapies that combat age-related disease, and perhaps aging itself.

- ✓ Anti-aging
- ✓ Healthier Life
- ✓ Fight Disease
- ✓ Quality Time

Like storing your newborn's umbilical blood stem cells, you can preserve your own stem cells for future treatment of conditions like heart attack, stroke, autoimmune disease, dementia, arthritis, and more.

Forever Labs is also developing therapies with the aim to use your younger stem cells to rejuvenate your older self.
